6 EASY WAYS TO GET YOUR CAR WINTER READY

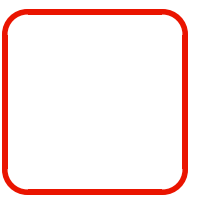

Swap out the old wiper blades for fresh, pliable ones that can take the cold.

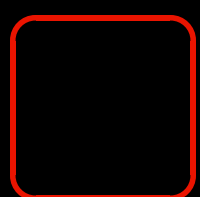

Winter tires are made of softer rubber that performs better in cold temps so get those changed, too.

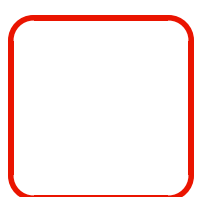

Inflate your tires properly. Over-inflated wheels won't grip the road well.

Don't wait until the cold zaps your battery before you make sure you have enough juice. Test it now.

Check your fluid levels like oil, wiper fluid, and especially don't forget the anti-freeze.

Restock your emergency car kit with everything you'd need in a bad situation.
